

The Massachusetts Coordinated Soil Health Program (MA CSHP) serves farmers, both organic and conventional, in each county of the Commonwealth. Through the implementation of cover crops, no-till, nutrient management, and other soil health management practices, soil health can be improved-- as can farm viability and resiliency to climate change.

**MASSACHUSETTS
COORDINATED**

in collaboration with

ARE YOU A PRODUCER IN MASSACHUSETTS INTERESTED IN SOIL HEALTH ASSISTANCE?

The Massachusetts Coordinated Soil Health Program is building a network of producers interested in adopting healthy soil practices. By taking our producer survey, you will be entered into a network of financial and technical assistance opportunities, research and events, and general soil health news from New England.

MA CSHP GOALS

- Expanding access to soil health testing
- Opportunities for learning, technical support and financial assistance
- Farmer education on healthy soils practices
- Overcoming financial barriers to healthy soils practices adoption
- Researching farmer practices, farm viability and soil health indicators

If you are a producer interested in sharing more about your current soil health practices, fill out the producer survey. Those who complete it prior to May 31st will be entered for a chance to win one of five \$50 gift cards.
